TOR 302 T-Buzzer

The Toreto TOR 302 T-Buzzer is both a Bluetooth speaker and a karaoke mic.

It comes with single-touch pairing and should be able to pair with any Bluetooth enabled device quite easily. We had no trouble pairing it with our phones.

The TOR 302's appeal lies in the fact that you can use it both as a mic and a speaker at the same time, which enhances the overall karaoke experience. You could play an instrumental version of a song you're planning to sing for example. It pairs up very well with most popular karaoke apps out there. Like Smule's Sing! Karaoke for example.

The TOR 302 comes with a TF slot, a USB slot and a 5V charging slot at the bottom. You can record stuff and store/save it using the TOR 302 itself via microSD cards or a USB device, and replay the recordings through the device's own speakers.

The control buttons for the TOR 302 are all present on a panel on the mic's handle. The buttons present include the on/off switch, echo control, volume control (the echo and volume control only come into play when using the device's mic functions). Then you have your standard speaker buttons, play/pause (receive calls) and previ-

ous/next. Lastly, you have the 'M' button for pairing and switching the modes.

When not in use specifically for karaoke, it functions like any bluetooth speaker with a mic, so you can use it to make and receive calls, listen to music, or just mess around with a portable mic.

In the looks department, Toreto has gone retro with the TOR 302. It's got a golden/bronze textured finish as well which further amplifies its retro appeal.

The device sports a metal body, so there's some weight to it. The device offers around 6-8 hours of battery life, which is longer than any karaoke party should last.

Price: ₹2,499

WD My Passport Wireless Pro

The WD My Passport Wireless Pro is directed at photographers and videographers who want easy access to portable and wireless storage. The device is easy to pair with any mobile device as long as it supports Wi-Fi. It becomes easy to offload, edit and stream photos or videos while on the go.

The Wireless Pro is built with 802.11ac, an SD 3.0 card reader, and USB 3.0. Attaching an external storage to the Wireless Pro via USB also further expands its wireless storage capabilities/capacity. You can also use the device to create a wireless hotspot to connect multiple devices to it. WD claims you can stream up to eight HD videos on eight different devices simultaneously.

Its battery can last for up to 10 hours on a full charge, so you should be able to keep it running for the entirety of your outing sessions.

The WD Wireless Pro doubles as a 6,400 mAh power bank; you can use it to charge your smartphones, DSLRs, or any other USB devices.

You can also use the Wireless Pro as a media server through which you can wirelessly stream your media. However, it uses a service called Plex to do so, which has caused some complications for some.

Price: \$199.99 (₹12,800 approx)
